

New Mexico Junior College

This multi-year partnership with New Mexico Junior College (NMJC) further strengthens our focus on local hiring in operations and maintenance areas. In particular it will help prepare students, such as those studying at the Career and Technical Education Center of Hobbs (CTECH), to qualify for the NMJC Nuclear Technology Program.

Upon graduation with a Certificate or Associate of Applied Science degree, these students will be ready to pursue a career as entry level technicians. This partnership includes the offer of a co-op program at our UUSA site in Eunice to give interested students hands-on experience to better understand the range of careers in nuclear.

Our partnership will enable students from the local area to recognise their potential and access innovative and rewarding careers. We are committed to supporting the next generation of workforce across the energy sector. The current students in the program are great examples of how local talent can become Urenco's future workforce.

Steve Saucedo

Vice President for Workforce Development, NMJC

NMJC

New Mexico Junior College

NMJC has around 2,500 students and is one of the best two-year independent colleges in the area. It prides itself in offering an excellent education and rewarding experiences for its students and fills an important educational need for Lea County and its surrounds by actively promoting success through learning.

Sustainability Spotlight

This project aligns with the Urenco sustainability strategy, our corporate values and UN Sustainable Development Goals.

Education and skills:

- A clear route for talented, non-traditional, students
- Enhances employment prospects for the local community
- Complements our educational partnership with Hobbs CTECH.

Environment and transition to net zero:

- Shares understanding of the role of nuclear and future opportunities.

UN Sustainable Development Goals:
